DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 19, and 21 drawn to reestablishing an IP connection and forwarding a screen refresh to an SNA application, classified in class 709, subclass 219 (accessing a remote server).
 - II. Claims 9-18, 20, and 22-23 drawn to reestablishing a TCP/IP connection and establishing a second TCP/IP connection if first connection request times out, classified in class 709, subclass 227 (computer-to-computer session/connection establishing).
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as a combination/sub-combination. Inventions in this relationship are distinct if it can be shown that (A) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (B) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because reestablishing a connection over a second connection can be accomplished without trying to reestablish a connection over the first connection and transmitting a query addressed to the client over the first connection and establishing a second connection in response to the connection request

if a response to the query is not received within a specified time period. The subcombination has separate utility such as reestablishing a connection over the first connection.

3. Applicant is requested to formally cancel the non-elected claims.
4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143)
5. PTO-892 from previous action dated 24 June 2004 is attached as per request.
